DID YOU KNOW?

Mechanical Testing, Inc. sells Enterprise Drones and can help you find the best one to fit your industry needs. We offer staff UAV training for a variety of industries. Don't want to do it yourself? Our pilots are professionally certified, FAA compliant, fully insured and can perform the inspection for you.

WHAT DOES THAT MEAN?

Our inspections offer drone solutions for Commercial, Industrial and Residential projects that can significantly reduce costs. Specifically, they can eliminate the need for costly lifts in many circumstances.

Drone use is a valuable option for companies. MTI offers different services for many different industries including project monitoring, UAV training, volume and distance square footage measuring, cell tower inspections and much more.

- Anything that requires light(s) inspection (building, tower) – night waiver
- Delivery services
- Job site safety review
- Weekly/Monthly Project Fly Over – video showing site safety compliance in place

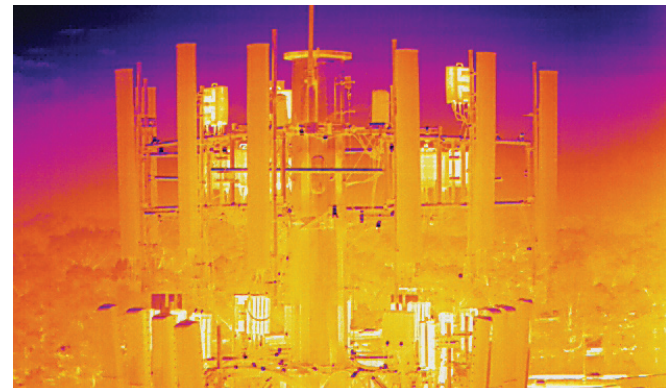

**Or we can tailor a project
based on your specific needs.**

WHY DRONES?

Drones can reduce insurance costs because they can get into dangerous places and evaluate situations by providing pictures and other needs without sending a worker up to evaluate. They also help speed up project work. They provide the ability to share information faster because we can provide video or pictures of any issues you may encounter first, before the work begins.

WHY THERMAL IMAGING?

Thermal Imaging allows you to see things the human eye can't. For example, heat loss in a building, identifying electrical issues in manufacturing, assisting firefighters to see through smoke and save lives faster, and so much more.
